Pre-requisites from Assignment 5A

Last week's release plan looked like this. We didn't accomplish our goal, but we do hope that we will catch up with our plan this sprint.

On the left is our Release Burndown chart for Sprint One. Like mentioned above we haven't finished one task which was "Good Graphic Content". It was valued at two team velocity.

Our Initial Sprint Burndown Chart looked like this. We believe that it will be accurate as we will try our best to finish our user stories from our current backlog.

Sprint 1 Progress/End of Sprint 1 DemoReview and Retrospective

During Sprint 1

At the start of our Sprint One. One of our Software Engineers, Oskar moved login feature and news feed to, “**To Do**” bracket. He began planning his code for the next two days.

With that he moved login feature to “**In Progress**” and started working on it.

He was having trouble doing so and decided to start on news feed. He moved it to “**In**

Progress” in order to work on that for the time being.

After a few days he finished login feature. Oskar moved it to “**Done**” and with that we had one of our user stories finished, with a sign in form and login/sign in feature.

Couple days later he finally finished news feed. He moved it to the right place on the home page and with the help of Connor our Product Owner he found the right RSS Feed. We had two user stories finished at the end of Sprint One.

On the last day of sprint 1 (Friday 28th of February)

On the last day of our sprint we made sure we were prepared for Sprint Two and that we had everything uploaded to GitHub, OneNote and LearnOnline.

Oskar started the second sprint on the 2nd of March. Before he made sure we had the four user stories in the backlog including the one we didn't finish in the last sprint.

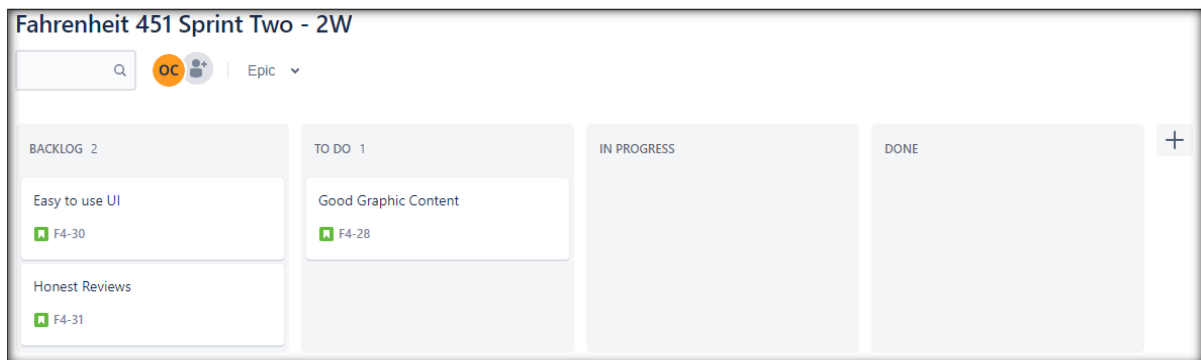

Our PO accepted what the team has done over term of sprint one and has hope that we will get every user story done before the release.

Demo

This is a link to a video showing how our website looked before Sprint One.

Sprint 2 Planning and Execution

The above is our Sprint Two plan for the duration of two weeks (2nd of March to the 13th of March). Last sprint we have not achieved our team velocity of six. Therefore, we moved one of our Topics (Good Graphic Content) to this sprint because of this, it brings our team velocity for this sprint to 8.

Our PO prioritized our user stories based on the most important things.

One of our Software Developers decided that he will take on the “**Good Graphic Content**” task but he will need other members to help him find good graphics.

He will also take on “**Easy to use UI**” after he will be finished with the Graphics.

The rest of the team will focus on the “**Honest Reviews**”.

Sprint 2 Risks

- Not enough participation from the team. Need more members to show up to meetings and scrum stand ups.
- Product Owner not agreeing with what is being done in story sizing.
